

Coastal Ecosystems Reference Database

<http://www.coastalrestorationtrust.org.nz/resources/coastal-reference-database/>

This database is an online bibliography of literature and information focusing on understanding, restoration and management of coastal ecosystems in New Zealand.

To date over 4000 coastal records are included in this database – over half have links to or PDFs of the abstract or full document.

What does it cover?

This reference database aims to make it easy to find information from both published and unpublished sources relevant to the restoration and management of our coastal ecosystems.

Information from both historical and recent sources covers:

- Coastal dune geomorphology
- Native and exotic flora and fauna of our dunes
- Scientific research
- Practical aspects of protection, enhancement and management of our coastal dune systems
- Other information relevant to understanding of our dunes and other coastal environments

Check it out on our website - it's easy to use

*Keeping this
database
ALIVE!*

This database is regularly updated – please send in new references and advise of any corrections or sources of information.

The database was originally funded by the Department of Conservation's Terrestrial and Freshwater Biodiversity Information System (TFBIS).

The Coastal Restoration Trust continues to fund updating of the database and acknowledges the work of Andrew La Cock, Lyneke Onderwater and Michael Bergin.
