

**Indigenous vascular plants of four forest remnants on dunes  
in Manawatu (Lake Alice, Pakipaki) and Northland (Tapu, Pretty Bush)**

**Whanganui Plant List 129**  
Colin Ogle, 16 Virginia Heights, Whanganui, 4501.

This list is extended from that in Ogle (1997), including the addition of Whanganui plant list 95 (L Alice dune forest).

*Last updated 20 April 2018 (names updated)*

- (a) Pakipaki, near Hokio, Levin, Horowhenua district  
(Druce 1972 [1991 revision]; Cooksley and Townsend 1992; Rapson et al. 1992; pers. obs. 1991, 1996, 11 July 2010); P Enright pers. comm. Jan 01 (his new records marked with ^)
- (b) Lake Alice near Bulls, Rangitikei district (Ogle, Beggs & Barkla 1996)
- (c) Pretty Bush, Pouto Peninsula, north head of Kaipara Harbour, Northland (Forester and Beechman 1987; Wright 1991; pers. obs. 1994)
- (d) Tapu Bush, Pouto Peninsula, Kaipara, Northland (Miller 1992; Reid 1977; Wright and Young 1991)

X = recorded as present

(X) = previously present (now extinct on site)

O = not within recorded geographic range for this species

\* = species not natural to this district (mostly adventive to NZ)

#### DICOT LIANES

<i>Clematis cunninghamii</i>	O	O	X
<i>Clematis forsteri</i>	8X	X	X

<sup>4</sup> Druce (1972, 1991) recorded *Elaeocarpus dentatus*; Cooksley and Townsend (1992) recorded *E. hookerianus* in their species list (p. 65), but *E. dentatus* in their figure on p. 67, and have told me (pers.comm. 1996) that *E. hookerianus* was an error; Rapson et al. (1992) recorded *E. hookerianus* only; I have seen *E. dentatus* only. No observer has recorded both species unambiguously, so only *E. dentatus* is retained at present on the above list.

<sup>5</sup> The only *Nestegis* species recorded by Druce (1972, 1991) is *N. montana*, a species I also saw at Pakipaki in 1991, 1996, along with *N. lanceolata*. Cooksley and Townsend (1992) and Rapson et al. (1992) record *N. cunninghamii* (but not *N. montana*), and Rapson et al. also list *N. lanceolata*. *N. cunninghamii* may be an error for *N. lanceolata* and is not retained in the above list.

<sup>6</sup> One found 11 July 2010 (L Perrie, pers. comm.)

<sup>7</sup> *S. microphylla* seems the most likely species in western Northland; *S. chathamica* is more typical of eastern Northland

<i>Clematis paniculata</i>	puawhangana	X

Pakipaki   Lake Alice   Pretty   Tapu

<i>Rumohra adiantiformis</i>	X <sup>11</sup>
------------------------------	-----------------

<sup>8</sup> Common at Pakipaki on 11 Jul 2010 – never recorded here previously

<sup>9</sup> Most references for the Northland forests do not identify the *Parsonsia* to species level, except that Reid (1977) listed *P. heterophylla* and not *P. capsularis*. Broad-leaved forms of *P. capsularis* are locally common in Northland, and only the latter is retained in the above list.

<sup>10</sup> Lists made before 2008 listed *P. richardii*; at Pakipaki on 11 July 2010 *P. neozelandicum* was common and this is the likely species at the other 3 sites.

Pakipaki   Lake Alice   Pretty   Tapu

<sup>11</sup> New find 11 July 2010 (L. Perrie)

<sup>12</sup> Possibly *C. alata*

<sup>13</sup> This unnamed *Carex* species has double-folded leaves (similar to those of *C. raoulii*) and, like *C. testacea*, has glabrous (not hispid) utricles, and the male spikes without fruits at their distal ends. The unnamed species seems to be largely coastal or semi-coastal in New Zealand. I lodged a CHR voucher from Pretty Bush.

<sup>14</sup> Members of Levin Native Flora Group, 11 July 2010

<sup>15</sup> Flowering 11 July 2010

<sup>16</sup> Most plant lists from Pretty Bush contain one *Uncinia* species in addition to *U. uncinata* (Wright 1991 recorded "U. ?rubra/scabra" and Forester and Beachman recorded *U. banksii*). In 1994 I saw only one fine-leaved species of *Uncinia* in Pretty Bush, *U. distans*.
